开关平台接入文档

1、开关平台开发/测试环境访问地址

http://172.16.150.143:8080/switch-web/manager/login.htm

2、应用接入开关平台步骤

前提条件:

应用必须首先接入配置中心

(1)、pom.xml引入开关平台客户端jar包

<dependency>
 <groupId>com.bozhong</groupId>
 <artifactId>switch-client</artifactId>
 <version>1.0.8</version>
</dependency>

(2)、接入应用添加zookeeper链接配置项

如:

switch.zkHosts=172.16.150.245:2181,172.16.150.247:2181,172.16.150.152:2181

(3) 、编写静态字段类

注意点:

字段修饰符必须为public static

字段必须有AppSwitch注解标识, type必填, desc选填

```
package com.bozhong.document.common;
import com. bozhong. myswitch. core. AppSwitch;
 * Created by xiezg@317hu.com on 2017/4/18 0018.
public class WebSettingParam {
   @AppSwitch(type = "string", desc = "公司")
   public static String CORP = "杭州伯仲信息科技有限公司";
   @AppSwitch(type = "string", desc = "部门")
   public static String DEPARTMENT = "云平台部";
   @AppSwitch(type = "string", desc = "网站标题")
   public static String HTML_TITLE = "文档转换中心";
   @AppSwitch(type = "string", desc = "节假日图片")
   public static String SPRING = "https://ss0.bdstatic.com/94oJfD_bAAcT8t7mm9GUKT-xh_/timg" +
           "?image&quality=100&size=b4000_4000&sec=1493888650&di=9e28deac7e81ef853d4519f2a2c1dc47&src" +
           "=http://www.dabaoku.com/sucai/qita/guoqingjie/18.jpg\n" +
           "\n";
}
```

(4)、编写zookeeper注册类,向zookeeper注册步骤3编写的静态字段类

如:

注意点:

appld:应用ID 必填

zhHosts:zookeeper链接信息 必填

dynamicClass:静态字段类(Spring可配置,或者程序写死)

```
package com. bozhong. document. common;
import com.bozhong.myswitch.core.SwitchRegister;
/**
 * Created by renyueliang on 17/4/12.
public class SwitchLoad {
    private String appId;
private String zkHosts;
    private Class dynamicClass;
    public void init() throws Throwable {
        if (dynamicClass == null) {
            dynamicClass = WebSettingParam.class;
        SwitchRegister.getSwitchRegister().init(this.appId, dynamicClass, this.zkHosts);
    public String getAppId() { return appId; }
    public void setAppId(String appId) { this.appId = appId; }
    public String getZkHosts() { return zkHosts; }
    public void setZkHosts(String zkHosts) { this.zkHosts = zkHosts; }
    public Class getDynamicClass() { return dynamicClass; }
    public void setDynamicClass(Class dynamicClass) { this.dynamicClass = dynamicClass; }
}
```

(5)、Spring配置为Spring框架管理的对象

(6) 、登录开关平台控制

开关平台(开发环境) 应用 BOSS平台 接入平台 solr 用户中心 权限中心 开关平台 文档转换中心

监控

应用 / 文档转换中心

开发环境 测试环境

序号	IP	路径	操作
1	172.16.120.2	/renylswitch/dev/25/172.16.120.2	关闭

序号	宇段名	值	修改时间	操作
1	HTML_TITLE	文档转换中心	20170509142203	修改
2	SPRING	https://ss0.bdstatic.com/94oJfD_bAAcT8t7m m9GUKT-xh_/timg? image&quality=100&size=b4000_4000&sec=1 493888650&di=9e28deac7e81ef853d4519f2 a2c1dc47&src=http://www.dabaoku.com/suca i/qita/guoqingjie/18.jpg	20170509142203	修改
3	CORP	杭州伯仲信息科技有限公司	20170509142203	修改
4	DEPARTMENT	云平台部	20170509142203	修改
